# How to connect the rooftop photovoltaic inverter

## Overview

---

There are two types of inverters used in PV systems: microinverters and string inverters. Both feature MC4 connectors to improve compatibility. In this section, we will explain each of them.

Planning the solar array configuration will help you ensure the right voltage/current output for your PV system. In this section, we explain what these.

Now, it is important to learn some tips to wire solar panels like a professional, below we provide a list of important considerations.

Up to this point, you learned about the key concepts and planning aspects to consider before wiring solar panels. Now, in this section, we provide you with a step-by-step guide on how to wire.

To do this, follow the next steps: Connect the female MC4 plug (negative) to the male MC4 plug (positive). Repeat steps 1 and 2 for the rest of the string. Connect the male MC4 connector of the first module and the female MC4 connector of the last one to the centralized inverter. Most inverters feature MC4 connectors to make this an easy task.

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

The daisy-chain cables just plug in to the inverters, but the end of the chain must be wired to the house electrical system. Make sure you fully understand the connection - the inverter cables may not use the colour conventions of your jurisdiction.

In this guide, I will walk you through a step-by-step process to seamlessly connect your solar panels to an inverter, enabling you to fully enjoy the benefits of solar energy while contributing to a greener and more sustainable future.

**Step 6: Link Solar Panels with Solar Inverter.** Connecting solar panels and solar inverters requires your meticulous attention and requires you to switch off the inverter during installation. Ensure the solar panel's positive wire is connected to the positive end of the inverter.
