Why are fault detection and diagnosis methods important for PV systems?

Thus, these faults would reduce the performance, reliability, and power generation from PV systems. Moreover, a certain fault, such as arc fault, ground fault or line-to-line fault, can result in fires. Consequently, fault detection and diagnosis (FDD) methods for PV systems are critical to maintain their stability and safety.

Can a fault in a photovoltaic system cause a fire?

Faults in any component of a photovoltaic (PV) system cannot be identified and repaired quickly. Thus, these faults would reduce the performance, reliability, and power generation from PV systems. Moreover, a certain fault, such as arc fault, ground fault or line-to-line fault, can result in fires.

What is a fault in a photovoltaic system?

Faults in any components (modules, connection lines, converters, inverters, etc.) of photovoltaic (PV) systems (stand-alone, grid-connected or hybrid PV systems) can seriously affect the efficiency, energy yield as well as the security and reliability of the entire PV plant, if not detected and corrected quickly.

What happens if a photovoltaic system fails?

Finally, challenges and suggestions are put forward for future research. If a failure in the components of a photovoltaic (PV) system, such as PV module, controller, inverter, load, cable, etc. goes undetected and uncorrected, it can seriously affect the efficiency, safety, and reliability of the entire PV power plant.

How to prevent unpredicted power interruptions in photovoltaic systems?

The installation of photovoltaic (PV) system, as a renewable energy source, has significantly increased. Therefore, fast and efficient fault detection and

diagnosis technique is highly needed to prevent unpredicted power interruptions. This is obtained in this study in the following steps.

Can PV circuit simulation be used for fault detection?

Stellbogen D. Use of PV circuit simulation for fault detection in PV array fields. In: Proceedings of the 20th IEEE: Photovoltaic Specialists Conference, 1993, p. 1302-7.
