How to drill the right holes in photovoltaic panels

Overview

By knowing how to mount a solar panel at home, you can save up to thousands of dollars upfront in installation. But irrespective of your experience, you must be careful when drilling the holes, fastening the mounts, and connecting the wires, as any error can damage the system, or you might end up hurting yourself.

By knowing how to mount a solar panel at home, you can save up to thousands of dollars upfront in installation. But irrespective of your experience, you must be careful when drilling the holes, fastening the mounts, and connecting the wires, as any error can damage the system, or you might end up hurting yourself.

During the process of installation of solar panels, installers will drill holes into the roof to anchor and mount the panels securely. But many homeowners, who want to switch to solar energy, are worried about whether the drilling of holes:

Lay the solar panel face-down on the tarp or canvas to protect the photovoltaic surface. You want to be sure the mounting holes on the back of the panel align with the holes in the fixing bracket. Don't modify the module frame because doing so may void your manufacturer's warranty.

Using that angle and knowing the length of the wire, you can know exactly where your stud is located and drill a new hole. Tip 15: X Marks the Bad Hole. If you drill a bad hole, cross it off with chalk so you know it is bad and to help you find it and fill it later. Then draw a circle around the good hole just for good measure.

This is as simple as it gets: drill hole, install sealant, tighten fastener. Quickbolt microflashing hardware. Racking hardware connects your panels to the L-feet and the flashing connections mentioned above.

How to drill the right holes in photovoltaic panels
