If you want to install the VillaGrid as part of a solar-plus-storage system, battery costs are just one part of the equation. A 5 kilowatt (kW) solar energy system costs anywhere from \$9,000 to \$15,000, depending on where you live and the type of equipment you choose.

The good news is that it's entirely possible to add battery storage to an existing solar panel setup. So-called "storage ready" systems are already equipped with an inverter that can easily direct excess power into a battery. But even if your system wasn't designed with storage in mind, you still have options.

The VillaGrid energy storage system delivers more power, more safety, and more useful life than traditional home batteries. Proven for years by NASA and the military, Lithium Titanate batteries are now available for home energy storage.

Explore the process of installing solar battery storage and what to expect at each stage. Plus, learn whether it makes more sense to install a solar-plus-storage system upfront or add a battery later.
