# How to install photovoltaic panels in old houses

## Overview

---

Before you begin the installation process, properly plan your solar panel system. This involves assessing your roof's suitability, determining the number of panels you need, and obtaining the necessary permits.

The first step in the physical installation process is securing the roof attachments supporting the solar panels. First, the installer will find the rafters beneath your roof shingles. They'll

With the stanchions in place, the next step is installing the racking to support the solar panels. Trethewey and Warda use aluminum rails for their project, securing them to the stanchions with stainless steel bolts. The bolts should be

With the mounting system and electrical components in place, Trethewey and Warda install the solar panels. Each panel is bulky and heavy, so lifting them onto the roof is often a two-person.

Before the panels can go on, their electrical conduit and wiring must be in place. A licensed electrician is often the one doing this work. First, Warda runs conduit from the roof to

Step-by-step guide for empowering your small old house with a solar panel system  
Assess Your Energy Needs . Check Your Home's Solar Potential . Understand Local Regulations and Incentives . Choose the Right Solar Panel System . Find a Reputable Solar Installer . Conduct a Home Energy Audit . Secure Necessary Permits and Documentation . Installation of the Solar Panel System . □□□□.

On the roof, lay out the locations of the stanchions that will support the solar panels. Screw each stanchion through the roof and into a roof rafter. Also, be sure the stanchion flashing fits beneath the roof shingles to prevent leaks. Fasten the upper and lower aluminum rails to the stanchions with

stainless steel bolts. Tighten the bolts with an impact driver. Measure diagonally across from the end of the upper rail to the end of the lower rail. Repeat to measure the opposite diagonal distance. Now install the middle rail, aligning it with the upper and lower rail. Run electrical conduit and wiring up to each array of solar panels.
