The five main steps to installing a solar panel system include an engineering site visit, permits and documentation, ordering equipment, the solar panel installation, and approval and interconnection.

Solar panel installation process.

Dig the trench to the appropriate depth. Pull the wires allowing for ample excess wire on each end. How do I prepare for a solar panel installation?

Installing solar panels helps homeowners save money and invest in cleaner energy. To prepare for an installation, determine your energy needs and home compatibility with a solar panel system. The installation requires complicated electrical work and paperwork that any reliable solar installer can handle.

How do I install a solar energy system?

Installation requires mounting the panels to your roof (or wherever you plan to install them), connecting them to one another and an inverter, and syncing your home's electrical system so energy goes toward your appliances and devices. Your panels may include specific instructions. Here are the typical steps to install a solar energy system. 1.

Can I install my own solar panels?

Although DIY options are available, hiring a professional solar company is best to ensure your panels are correctly and safely installed. Yes, it's possible to install your own solar panels. However, DIY installations require electrical skills and advanced knowledge of solar energy that most DIYers don't have.

How do I get solar power?

Here are the steps to take to get powered by sunshine. Choose a solar installer. An installer can help you determine whether your roof is suitable for solar panels. Begin by researching qualified, insured installers online or asking for recommendations from people who've gone solar.

Do I need an electrician to install solar panels?

You'll still need professional assistance, including a licensed electrician, to properly install your panels. We recommend using a certified solar installation company to ensure a safe and proper installation. For a visual walk-through of what goes into installing solar panels, check out the video below.

How long does it take to install solar panels?

The installer will then install the solar panels to the racking and connect the electrical wiring. They'll also install any additional equipment, such as an inverter or battery bank. Many solar installers can complete installation in just one day. More complicated installations can take three or more days.
