The Encharge™ storage system includes the Enphase Encharge Battery(ies) with integrated Enphase IQ™ Microinverters. The Enphase IQ Envoy™ communication gateway measures PV production and home energy consumption. The Encharge storage system senses when it is optimal to charge or discharge.

It’s relatively easy to add a battery to your existing solar panel system, but the level of ease depends on the type of solar inverter you have. If your inverter isn’t compatible with a battery, the simpler and more affordable solution is to install an AC-coupled battery system.

What is the solar battery storage installation process?

The solar battery storage installation process typically involves an initial site assessment, system design, equipment procurement, installation, and wiring,

connection to the solar panels and inverter, testing and commissioning, and finally, system monitoring and maintenance to ensure optimal performance and longevity.

Who can install energy storage at a facility?

This could include building energy managers, facility managers, and property managers in a variety of sectors. A variety of incentives, metering capabilities, and financing options exist for installing energy storage at a facility, all of which can influence the financial feasibility of a storage project.

How do you install a battery storage system?

The exact placement depends on various factors, including available space, environmental conditions, and safety considerations. Mounting and racking refer to the installation of the battery storage system, which involves securely attaching the batteries and associated equipment to a structure or mounting system.

Do I need electrical upgrades when installing a solar battery storage unit?

Electrical upgrades may be necessary when installing a solar battery storage unit. These upgrades ensure a safe and efficient system and can include modifications to your electrical panel, installation of dedicated circuits, or reinforcement of wiring infrastructure.

Can you add battery storage to a solar panel?

The good news is that it's entirely possible to add battery storage to an existing solar panel setup. So-called "storage ready" systems are already equipped with an inverter that can easily direct excess power into a battery. But even if your system wasn't designed with storage in mind, you still have options.

Do Encharge storage systems provide backup power?

Encharge storage systems are capable of providing backup power when an Enphase Enpower™ smart switch is installed at the site. For installing Encharge with 3rd party PV inverter please refer to the planning guide document on Enphase Energy Storage System for third party PV invert-ers online on Enphase website.
