How do you install a Nanobit truss on a metal roof?

Apply a circular bead of sealant around the bottom of the NanoBit. Locate the center of the truss, rafter, or purlin in the desired roof location and drill a pilot hole. Clean sawdust, and fill hole with sealant. Use a 13mm (1/2") hex socket to install the Lag Screw. SunModo is proud to introduce NanoBit, Solar's Fastest Attachment for Metal Roof.

What are solar ready trusses?

There are things such as "Solar Ready Trusses". These are based on standards that have been agreed upon by all the engineering stakeholders for building homes & structures that intend to have solar installed on them. Therefore, they have been pre-engineered to handle the loads & attachment methods.

How do you attach a truss to a roof?

"When attaching to almost any roof that is supported by wood rafters or trusses, and then covered with plywood or OSB deck, the easiest and safest approach is to attach rail or racking anchorages to the truss/rafter, but attach to every one, not every second or third one, thus distributing loads evenly over all trusses," he said.

How do you install EPDM trusses?

Using a drill with a hex head bit, install the hex head screw. Press down firmly on the drill so that the tip of the screw quickly pierces the EPDM and goes into the roof decking and then the truss. Do not over tighten the screw. This is especially important for those screws that won't be going into the truss.
