# How to lay photovoltaic panels horizontally and vertically

## Overview

Homeowners have the option to install them using differing orientations, depending on the shape of your roof. However, it is more efficient to have a consecutive block of solar panels installed using the same orientation— either vertical or horizontal.

Homeowners have the option to install them using differing orientations, depending on the shape of your roof. However, it is more efficient to have a consecutive block of solar panels installed using the same orientation— either vertical or horizontal.

You can have vertical panels tilted at an angle, so the diffused light reflects off of clouds onto the solar panels. No matter what, you want to find the orientation that provides your house with the most energy. If this means you should install solar panels horizontally, you should try it.

Solar panels are mounted to the rafters on your roof using “rails.” Since panels are not as wide as they are tall, it takes fewer rails to install the panels in a vertical orientation than in a horizontal orientation. Less railing means less overall cost! The slant and size of your roof allow the panels to fit more efficiently with a .

Optimize your solar panel installation! Choose the perfect orientation for your rooftop solar panels with our expert guidance on vertical vs horizontal installation.

Solar-paneling construction and installation services often face a medley of issues, including which way to orient the panels - whether vertical (portrait) or horizontal (landscape). This blog is going to break down how the landscape and porch orientations influence the cost.
