# How to prevent dust on photovoltaic panels in the desert

## Overview

---

Dust that accumulates on solar panels is a major problem, but washing the panels uses huge amounts of water. MIT engineers have now developed a waterless cleaning method to remove dust on solar installations in water-limited regions, improving overall efficiency.

Dust that accumulates on solar panels is a major problem, but washing the panels uses huge amounts of water. MIT engineers have now developed a waterless cleaning method to remove dust on solar installations in water-limited regions, improving overall efficiency.

One of the best places to put a solar panel is in the desert, where it's sunny. But deserts are also dusty, which means the panels have to be washed frequently so the dust doesn't stop.

A better way to clean solar panels. New waterless method cleans dust from solar installations in the desert. By. David L. Chandler. April 27, 2022. Dust that accumulates on solar panels.

MIT engineers have now developed a waterless cleaning method to remove dust on solar installations in water-limited regions, improving overall efficiency. The new system uses electrostatic repulsion to cause dust particles to detach and virtually leap off the panel's surface, without the need for water or brushes.

Long term dust deposition in the Middle East can reduce solar panel output by as much as 50% [8]. Developing a reliable model of solar panel electricity generation incorporating meteorological effects in the Middle East poses a significant challenge.
