# How to remove the five wires of the photovoltaic inverter

## Overview

---

PV Powered designs, manufactures, and markets the solar power industry's most reliable photovoltaic solar inverter solutions. We've assembled a highly experienced solar power electronics design team. Our vision is to spur the widespread adoption and success of solar power, by assisting our distributors, dealers and.

**DANGER !** The Danger statement is used to inform the installer/operator of a situation requiring the utmost attention. Failure to heed this warning will result in serious injury or death to personnel and destruction of equipment.

The inverter and the PV System Disconnect ship as an integrated unit. When the inverter installation is complete, the PV System Disconnect also needs to be secured to the wall. Make sure the AC/DC ON/OFF switch is.

Disconnect the AC and DC switchesInspect your system to check if it has a disconnect switch. If not, place a reflecting or opaque surface over the solar panels.Verify that the voltage is zero by using a voltmeter or multimeter.Unplug the wires. This is simple using MC4 connectors, or you may use a socket wrench.If necessary, take out the bolts and clamping mechanisms.

Do not remove the PV System Disconnect after is installed. The AC/DC disconnect switch in the PV System Disconnect is compliant with UL 98. This is a non-serviceable component and needs to remain in place even during

removal of the inverter. Removal of the PV System Disconnect can expose energized conductors.

Release and remove the AC connector from the inverter. Hook a flat-blade screwdriver (blade width: 4 mm (0.16 in)) into the wide slot on the plug and lever it open. At the same time, pull out the AC connector without pulling the cable. Use a flat-blade screwdriver to remove the protective cap.

Use the following procedure to remove the inverter cover. To remove the inverter cover 1. Switch the inverter ON/OFF/P switch to OFF. 2. Enter SetApp and in the Commissioning screen, select Maintenance>Standby Mode>Enable. 3. Wait five minutes for the capacitors to discharge. 4. Switch the Safety Switch to OFF. 5. Disconnect the mains AC supply .

Steps To Disconnect Your Solar Panels. There are two steps here: turning off the PV system and disconnecting the solar panels. Most repair work involves disconnecting the system, whereas a physical move incorporates the second set of instructions.
