Calculating the Optimal solar panel Angle. As a rule of thumb, solar panels should be more vertical during winter to gain most of the low winter sun, and more tilted during summer to maximize the output. Here are two simple methods for calculating approximate solar panel angle according to your latitude.

The table below lists the optimal tilt angle and direction for fixed solar panels for the US cities and regions by zip codes. Note: The optimal title angle does not change for different zip codes within the same city or region. Also, the optimal direction for fixed solar panels is south for the entire US. If your city is not listed in the below .

To get maximum solar power, we must adjust panels at the azimuth angle near solar noon. You can use SolarSena's azimuth angle calculator to find the azimuth angle of your location. For example, if your azimuth angle is  $160^\circ$ , as per the previous table, the south direction is the best direction for you.
