is one way to capture sunlight and change it into usable heat energy. A closed car on a sunny day is like a solar collector. As sunlight passes through.

Heating with solar energy is not as easy as you might think. Capturing sunlight and putting it to work is difficult because the solar energy that reaches.

Space heating means heating the space inside a building. Today, many homes use solar energy for space heating. A passive solar home is designed to let in as much sunlight as possible. It is.

kilowatt-hour to produce electricity from solar cells. On average, people pay about eight cents a kilowatt-hour for electricity from a power company using fuels like coal, uranium or hydropower. Today, PV systems are mainly used to generate electricity in areas that are a long way from electric power lines. PAGE . 4 . Exploring Solar Energy Student.

Department of Energy Solar Curriculum in Your School: The Bright Solar Futures program offers a free high school curriculum to train the next generation in solar energy design and installation. The program provides hands-on learning, internships, and job placement support.

This unit explores solar energy as a renewable energy source. Through engaging activities, students investigate the principles of light energy and design, build and test solar-powered ovens, water heaters, and a mini-city.

Solar energy is a renewable resource, and many technologies can harvest it directly for use in homes, businesses, schools, and hospitals. Some solar

energy technologies include photovoltaic cells and panels, concentrated solar energy, and solar architecture.

What Is Solar Power?

What are solar cells, and how do they work?

Find out more about solar power - and learn how this renewable resource harnesses the power of the sun into usable energy. How do students learn about solar energy?

Students use a backgrounder and hands-on explorations to develop a basic understanding of solar energy. **CONCEPTS** ■ Nuclear reactions within the sun produce enormous amounts of energy, some in the form of radiant energy that travels through space to the earth. ■ Most of the energy on Earth came from the sun.
