# Inertial Energy Storage System

## Overview

Can an energy storage system provide inertial response and primary frequency regulation?

An energy storage system (ESS) might be a viable solution for providing inertial response and primary frequency regulation. A methodology has been presented here for the sizing of the ESS in terms of required power and energy. It describes the contribution of the ESS to the grid, in terms of inertial constant and droop.

How does inertia affect energy storage?

The inertia response of an energy system limits the rate of change of frequency, known as RoCoF, when a sudden change in load is encountered. Systems such as thermal energy storage and pumped hydroelectric have very little associated inertia and may be thought of as providing slow response energy storage.

What is real inertia?

Real inertia is distinct to emulated or synthetic inertia, and may be thought of as energy storage that acts in an entirely passive manner. That is to say, the transfer of energy is determined completely by the reluctance of the system to change speed.

What is ROCOF-based sizing of energy storage system for virtual inertia support?

RoCoF-based sizing of Energy Storage System for Virtual Inertia support. Consideration of traditionally dismissed phenomena such as local frequency dynamics. Virtual Inertia support is offered as a coordinated effort across different power system areas. The method is validated in IEEE 9-bus system.

What is a conventional energy storage system based on a battery?

A conventional energy storage system (ESS) based on a battery has been

used to tackle the shortage in system inertia but has low and short-term power support during the disturbance.

How much inertia is seen by the grid?

Large inertia constants may be calculated (1440 s for the developed system) and, during certain mode of operation, there is no ambiguity as to whether this inertia is “seen” by the grid. Assuming steel prices of £2000/tonne, unit energy storage costs of approximately 111.5£/kW hr are achievable with this system.
