Intelligent light-chasing solar power generation system

Overview

What is a tracking solar PV power generation system?

We design and construct an intelligent tracking solar PV power generation system. The core processor of this system is a field-programmable gate array (FPGA). It uses a two-degree-of-freedom (2-DOF) mechanical system and corrects its attitude using closed-loop control.

Does a dual axis solar tracking system increase energy generation?

A novel UV sensor-based dual-axis solar tracking system is proposed. It utilizes the advantages of UV radiation enhancement and the UV sensor capability. A comparative study using a fixed flat-plate system and an LDR-based tracking system. An increase in energy generation of 19.97% is achieved by the novel tracking system.

Can a tracking system improve solar energy generation?

The observations of the proposed tracking system can aid studies for enhancing solar energy generation with single- or dual-axis tracking systems. Furthermore, it can be extended and utilized for various applications of solar energy. Finally, the economic performance was evaluated to obtain the cost-competitiveness and profitability.

What is the significance of solar PV power generation technology research?

This paper has presented the study and summary of the utilization and prospects of solar PV cells at home and abroad and has pointed out the significance of the PV power generation technology research. In addition, this paper has presented the profound study of the efficiency of the solar tracking and MPPT technology to enhance the mechanism.

Why is large-scale PV technology important?

Although PV technology offers various auxiliary improvements in traditional power system, the large-scale PV deployments also induces challenges and

risks on the system, attracting numerous research interests and investors , .

Can artificial intelligence improve solar tracking performance?

AL-Rousan et al. applied artificial intelligence (AI) using an adaptive neural fuzzy inference system (ANFIS) to enhance the solar tracking performance. This algorithm employed month, day, and time as input variables to predict the optimal orientation angles.

Intelligent light-chasing solar power generation system

Automated Dual-axis Solar Tracking System Using Fuzzy Logic ...

Utilization of solar powered system as renewable energy alternatives plays a dominant role in generating electricity. Throughout the years, solar tracking system has been continuously ...

Design of automatic cleaning solar street light tracking system

Abstract: This project proposes the design of automatic cleaning function and automatic light source tracking system for solar street lamps. The external environment is detected by ...

An IoT-based intelligent smart energy monitoring system for ...

...

solar energy might have on our energy system in the long-term future. Solar Street lights, solar cities, smart villages, microgrids, and ground-mounted solar are some of the applications for ...

Design of automatic cleaning solar street light tracking system

This project proposes the design of automatic cleaning function and automatic light source tracking system for solar street lamps. The external environment is detected by sensors, and ...

**??SMT????????????????????-?????
?? ...**

????????????????,????????"?"????,????????????????
?????????. ?????,?????????????????????. In order to
...

A novel UV sensor-based dual-axis solar tracking system: Implementation

On a sunny day (Day 39), the PV power generation attained 40 W from 09.00 to 14.00 for all systems as shown in Fig. 13 (a). However, the studied LDR-based and UV sensor ...

Research on Intelligent Regulation System of Solar Panels ...

Abstract. This paper proposes a design method for tracking solar panel light tracking control system based on microcontroller. The main structure of the system includes light intensity ...

Achieving wind power and photovoltaic power prediction: An intelligent ...

The wind-solar complementary power generation system can make full use of the complementarity of wind and solar energy resources, and effectively alleviate the problem ...

Design and implementation of an intelligent single axis automatic ...

This research included the possible platform benefits of using a phase engine and light sensor to specifically follow a near planetary system with a single pivot tracker. This ...
