Develop solar energy grid integration systems (see Figure below) that incorporate advanced integrated inverter/controllers, storage, and energy management systems that can support communication protocols.

In distributed solar applications, small PV systems (5–25 kilowatts [kW]) generate electricity for on-site consumption and interconnect with low-voltage transformers on the electric utility system.

Distributed or rooftop solar PV, is situated within the distribution network on rooftops, parking lots, or nearby consumers, while centralized or utility PV plants are connected to transmission net.
