# Ireland bmet energy

## Overview

---

What is Ireland's national biomethane strategy?

Ireland is currently developing a National Biomethane Strategy that aims to produce 5.7 TWh of biomethane by 2030. Carbon Capture and Storage (CCS) developments in Ireland following inclusion in CAP24. CCS will be critical to decarbonising cement manufacturing and incinerators in Ireland.

Are data centers consuming too much energy in Ireland?

Ireland embraced data centers that the AI boom needs. Now they're consuming too much of its energy CLONDALKIN, Ireland (AP) — Dozens of massive data centers humming at the outskirts of Dublin are consuming more electricity than all of the urban homes in Ireland and starting to wear out the warm welcome that brought them here.

Will Ireland's Transport and electricity emissions exceed the first carbon budget?

It is also likely that Ireland's transport and electricity emissions will exceed their sectoral emission ceiling in the first carbon budget (2021-2025). Any emissions that exceed the first carbon budget are carried over into the second carbon budget, where they will need to be addressed by even more intensive policies and measures.

Are data centers causing nitrogen oxide pollution in Ireland?

Ireland's Environmental Protection Agency has also flagged concerns about nitrogen oxide pollution from data centers' on-site generators — typically gas or diesel turbines — affecting areas near Dublin. A crackdown began in 2021, spurred by projections that data centers are on pace to take up one third of Ireland's electricity in this decade.

Is the grid ready to carry 80 percent of Ireland's Electricity?

It is making the grid ready to carry up to 80 per cent of Ireland's electricity from renewable sources, as set out in the Government's Climate Action Plan. EirGrid's "Shaping Our Electricity Future" roadmap provides a pathway to achieving this, says Mark Foley, its chief executive.

What will Ireland's energy supply look like in 2022?

Petrol demand may be 7.4% higher than in 2022 and reach 96.5% of the pre-COVID demand observed in 2019. Transport emissions may be 11.8 MtCO<sub>2</sub>e, up slightly on 2022 emissions. In the first 9 months of 2023, Ireland imported 9.1% of its electricity supply, up from 1.1% in 2022.

## Energy In Ireland , Key Publications , SEAI

Ireland's national energy-related emissions in 2023 were at their lowest level in over 30 years. Energy-related emissions in 2023 were 31.4 MtCO<sub>2</sub> eq, down 8.3% on 2022 levels, and lower even than those observed during the height of COVID impacts in 2020. Energy-related emissions fell by over 2.8 MtCO<sub>2</sub> eq in 2023 - the largest annual reduction observed in 12 years.

## **Ireland embraced AI boom. Now data centers eat too much of its energy**

21 ????· Decades of rapid extraction fostered Ireland's energy independence and employed scores of workers in turf-cutting, briquette factories and power plants. But it also polluted the air and devastated a delicate environment. Bogs that naturally trapped large amounts of carbon dioxide were stripped down to the bedrock, contributing to global warming.

## **Ireland's energy emissions at their lowest rate in 30 years**

National energy related emissions decreased by 8.3% in 2023 reaching their lowest level in thirty years. The data shows good signals of progress,

but Ireland will have to increase the rate of change significantly to deliver on its legally binding targets.
