Are solar panels a good option for your home?

Residential solar panels allow you to pull less energy from the grid. With the addition of solar batteries, solar panels could make your home self-reliant and independent from the electric grid. Solar batteries store energy created during sunny hours, allowing it to be used at night or on cloudy days.

Are rooftop solar panels right for You?

Rooftop solar panels aren't the perfect fit for everyone, but that's okay. Like any other home electrification product, solar panels provide clear benefits to homeowners needing energy upgrades and electricity bill reduction. The pros of solar outweigh the cons in most situations.

What are the pros and cons of a solar panel?

A solar panel is a device that helps convert sunlight into electricity. The pros of using solar panels include a lower carbon footprint, lower electric bills, potentially higher home value and tax credits. The cons include high initial costs, specific roof requirements, possible higher property taxes and storage costs.

Are solar panels right for You?

You'll want to understand solar's disadvantages before deciding if it's right for you: 1. Solar panels don't work for every roof. If you have a south-facing roof sloped between 15 to 40 degrees, you're in great shape for solar. Even with an east- or west-facing roof, or one that's flat, solar's likely still worth it.

Why should you install solar panels at your home?

When you install solar panels at your home, you generate your own electricity, become less reliant on your electric utility, and reduce your monthly electricity bill. A solar panel system typically has a 25- to 35-year lifespan, meaning you can cut your electricity costs for decades by going solar.
