Is it okay to use ordinary wires for photovoltaic panels

Overview

There are two types of inverters used in PV systems: microinverters and string inverters. Both feature MC4 connectors to improve compatibility. In this section, we will explain each of them.

Up to this point, you learned about the key concepts and planning aspects to consider before wiring solar panels. Now, in this section, we provide you with a step-by-step guide on how to wire solar panels.

Planning the solar array configuration will help you ensure the right voltage/current output for your PV system. In this section, we explain what these items are and their importance.

Now, it is important to learn some tips to wire solar panels like a professional, below we provide a list of important considerations.

This is unacceptable for solar panels that are designed to last a very long time. Therefore, the National Electrical Code prohibits using just any cable in your solar panel.

This is unacceptable for solar panels that are designed to last a very long time. Therefore, the National Electrical Code prohibits using just any cable in your solar panel.

Solar panels operate on direct current (DC), necessitating the use of wires designed specifically for solar energy generation. Among the most widely used wires are THHN, USE-2, and PV wire. Can a solar panel be wired with regular cables?

According to the National Electrical Code, solar panels cannot be wired with just any cable. The only two options are PV wires and USE-2 cables. Although photovoltaic wires are preferred for solar panels, they are not the only acceptable type.

How to wire solar panels together?

Wiring solar panels together can be done with pre-installed wires at the modules, but extending the wiring to the inverter or service panel requires

selecting the right wire. For rooftop PV installations, you can use the PV wire, known in Europe as TUV PV Wire or EN 50618 solar cable standard.

Can a photovoltaic system be used outside?

According to the National Electrical Code, article 690, both PV wires and USE-2 (Underground Service Entrance) are permitted to be used outdoors in photovoltaic systems.

What type of electrical cable should I use for my PV system?

For a PV system, photovoltaic wires are the more modern and all-around acceptable choice. However, USE-2 cables are still commonly used, especially for cost considerations in ungrounded systems.

What is a photovoltaic (PV) cable in solar energy?

Photovoltaic (PV) cables are specifically designed for use with solar panels. They come in various voltages and may have a copper or aluminum conductor. PV cables differ from regular DC cables due to their specific design tailored to the solar industry.

How to choose a solar panel wire?

In fact, choosing a thin wire for a high-capacity solar panel can cause voltage drop, overheating, and increased risk of fire. Aside from other factors, considering the length of the solar panel is critical. Always purchase a solar wire that is a little thicker, especially when you want to run it an extra length.
