The battery systems would collect and store renewable power produced by solar facilities in the region for transmission via the grid during hours of electricity peak demand.

Renewable energy generated in the nearby northern regions of the country will be stored in the battery energy storage system (BESS) facilities, transmitted to urban demand centres at times of peak . What are ESS batteries?

ESS batteries are the foundation for a decarbonized grid. Iron flow technology allows for unlimited cycling with zero capacity degradation over a 25-year design life. That enables stacked revenue streams. Long-duration energy storage (LDES) is the linchpin of the energy transition, and ESS batteries are purpose-built to enable decarbonization.

Where will Enlight batteries be used?

The batteries will be used in two projects secured by Enlight in tenders held by the Israel Public Utility Authority for Electricity. Israel-based wind and solar project developer Enlight Renewable Energy Ltd has agreed to buy around 430MWh of batteries from Chinese inverter and storage system provider Sungrow.

How will solar power impact Israel's Energy Future?

Last year the Israeli government introduced its goal of generating 30% of its electricity needs via renewables by 2030. Solar PV is expected to contribute to most of it, corresponding to 26% of Israel's renewable electricity in 2030, indicating 12 GW to 15 GW of new PV installations in the coming decade.

How can Israel achieve a high percentage of solar usage?

To reach such a high percentage of solar usage, Israel is currently aiming to develop an advanced solar-plus-storage system to ensure a stable and reliable electricity grid.
