Manual adjustment of photovoltaic panel angle

Overview

A rule of thumb is to increase the tilt angle by about 15 degrees in the winter and decrease it by 15 degrees in the summer from your baseline, which is typically your latitude.

A rule of thumb is to increase the tilt angle by about 15 degrees in the winter and decrease it by 15 degrees in the summer from your baseline, which is typically your latitude.

However, you can adjust the tilt of the panels by roughly 15 degrees in the summer or add 15 degrees in the winter for better performance.
