# Micro PV inverter power

## Overview

---

Microinverters convert power at individual photovoltaic (PV) panels and are usually rated at below 400 Watt for single PV panels and up to 1.5 KW for multiple PV panels.

Microinverters convert power at individual photovoltaic (PV) panels and are usually rated at below 400 Watt for single PV panels and up to 1.5 KW for multiple PV panels.

Microinverters are a type of power inverter used by rooftop solar systems to convert the sun's light into electricity.

They take the DC power produced by the solar panel they connect to and convert it into AC power.

Microinverters are often used as an alternative to string inverters to perform the DC to AC power conversion at solar panel level in residential photovoltaic systems.
