Microgrid Demonstration Project Proposal pdf

Overview

What is a microgrid design guide?

This guide is meant to assist communities – from residents to energy experts to decision makers – in developing a conceptual microgrid design that meets site-specific energy resilience goals.

What is a microgrid project?

The primary goal for microgrid projects is to increase the energy resilience and enhance the ability to serve an installation's electrical loads during a contingency situation.

Should microgrid planning and design tools be repurposed?

While microgrid planning and design tools achieve their project goals and requirements, repurposing them to meet new or evolving requirements is often a time consuming and difficult proposition.

What is a microgrid report?

This report provides (1) an overview of the microgrid planning, assessment, and design process for DoD installations and (2) is a resource for energy managers, policymakers, contractors, and other stakeholders involved in microgrid projects.

Is design-bid-build procurement a good fit for microgrids?

The design-bid-build procurement process common in construction projects may not be a good fit for implementing microgrids. Microgrid projects could benefit from changes to the standard RFP template and from common DoD design-bid-build project specifications.

What is a microgrid solicitation?

The microgrid solicitation was a design-build project and was awarded to a

joint venture of Schneider Electric and Black and Veatch in 2016. Engineering design for the project was completed in 2017, and construction started in 2018. Construction completion and project commissioning are both expected in 2019.
