## Overview

---

This hierarchical control structure consists of primary, secondary, and tertiary levels, and is a versatile tool in managing stationary and dynamic performance of microgrids while incorporating eco.

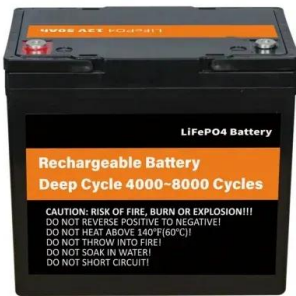

This hierarchical control structure consists of primary, secondary, and tertiary levels, and is a versatile tool in managing stationary and dynamic performance of microgrids while incorporating eco.

The Microgrid control functions as the brain of the microgrid, and thus requires a complex design consisting of three levels of control: primary, secondary, and tertiary.

Hierarchical control of MGs refers to the management and coordination of multiple interconnected microgrids within a larger system and the establishment of control structures and techniques at diff.
