Microgrid project costs

Overview

A 2018 study conducted by the National Renewable Energy Laboratory found that microgrids in the Continental U.S. cost an average of \$2 million-\$5 million per megawatt.

A 2018 study conducted by the National Renewable Energy Laboratory found that microgrids in the Continental U.S. cost an average of \$2 million-\$5 million per megawatt.

Sources we've interviewed cite project proposals as low as \$250,000 to as high as \$100 million. Generation typically accounts for most of the cost. What is a microgrid cost model?

The National Renewable Energy Laboratory was commissioned by the U.S. Department of Energy to complete a microgrid cost study and develop a microgrid cost model. The goal of this study is to elucidate the variables that have the highest impact on costs as well as potential areas for cost reduction. This study consists of two phases.

What is the DOE's microgrid cost study?

The U.S. Department of Energy's (DOE's) microgrid cost study is identifying the costs of components, integration, and installation of U.S. microgrids; project cost improvements; and technical accelerators during the next 5 years and beyond.

What does Phase 2 of a microgrid project involve?

In a microgrid project, Phase II uses the results of Phase I to gain an initial indication of the costs that might be driving the cost of development the most. Cost information for 80 microgrids was collected through a survey by directly contacting industry members and microgrid owners and from publicly available information.

How much does a microgrid controller cost?

Controller costs per megawatt range from \$3,500/MW to nearly \$600,000/MW (excluding outliers), with a mean of \$85,000/MW. The analysis shows that controller costs as a percentage of total microgrid costs are relatively similar among the projects in our database and the NY Prize data despite the wide variety of system sizes, types, and uses.

How much does energy storage cost a microgrid?

In commercial and industrial microgrids, energy storage represents 15% and 25% of the total costs per megawatt, respectively. In commercial microgrids, soft costs account for 43%, while in community microgrids they account for 24%.

How much does a microgrid cost per megawatt?

The community microgrid market has a mean cost of \$2.1 million per megawatt of DERs installed.
