Microgrid real-time simulation demonstration

Overview

How to design a microgrid system for real-time simulation?

Block diagram of the microgrid system for REAL-TIME simulation is shown in Fig. 8. Design of any system for REAL-TIME simulation should have at least two block, computation block and SC block. Computation block keeps all the computation part of the system and SC-block keeps only the output-input parts.

Is solar energy based microgrid a real-time system?

So, it is reported from the above survey that most of the real time systems are designed using solar energy system only with BES. It means that wind energy, solar energy and BES unit based microgrid system is not yet developed in real-time simulator. Capacity of power generation depends on the MPPT system of the renewable energy sources.

What is op4510 microgrid simulator?

OP4510 simulator, that is used for the simulation of the proposed microgrid, it has four CPU core. Real Time Simulation setup has two parts, one is HOST-PC and another one is REAL TIME TARGET system. REAL-TIME target system includes the REAL-TIME SIMULATOR. Block diagram of the microgrid system for REAL-TIME simulation is shown in Fig. 8.

Can a microgrid battery be used in a windy day?

It is assuming a windy as well as sunny day where both the renewable energy resources are available to generate power to feed the load demand. Still, there exist a time period when the demand is higher than the generation and for balancing that kind of situation of microgrid battery is used.
