Overview

What is Guatemala's energy source?

This page is part of Global Energy Monitor 's Latin America Energy Portal. In 2018, Guatemala derived 57.43% of its total energy supply from biofuels and waste, followed by oil (29.54%), coal (7.68%), hydro (3.22%), and other renewables such as wind and solar (2.12%).

What is the National Energy Plan of Guatemala?

New techniques and technologies will be needed to decarbonise these areas. The National Energy Plan of Guatemala defines the promotion of renewables as a priority. The plan aims to promote the use of clean and environmentally friendly energy for domestic consumption without losing sight of energy security and the need for supply.

Does Guatemala produce natural gas?

Guatemala does not produce any natural gas. Guatemala consumed 89,000 bbl/day as of 2016 of refined petroleum products. Oil and gas is imported primarily from the United States and Mexico.

ENERGY PROFILE Guatemala

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

Guatemala: Energy Country Profile

Guatemala: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Energy profile: Guatemala

Guatemala's most recent national energy plan aims to reduce greenhouse gas emissions by 29.2% between 2017 and 2032 through energy efficiency and renewable energy. Guatemala outlined a slightly more modest GHG reduction goal in its 2017 Nationally Determined Contribution proposal, pledging a 22.6% reduction vs. business as usual by 2030.
