¿Se puede almacenar energía

solar?

La mayoría de los propietarios de viviendas deciden utilizar baterías solares para almacenar energía solar. Técnicamente, la energía solar puede guardarse mediante métodos de almacenamiento de energía mecánicos o térmicos, como los sistemas hidroeléctricos de bombeo o las tecnologías de almacenamiento en sales fundidas.

Al igual que el PHS, el almacenamiento de energía en aire comprimido (CAES) utiliza electricidad fuera de horas punta para almacenar energía. Sin embargo, en este caso, la energía se utiliza para comprimir aire y almacenarlo bajo tierra. A demanda, este aire comprimido se expande en una turbina para generar electricidad.

Además, para poder almacenar, "tiene que haber mucho excedente" y por lo tanto tener una instalación grande o muy grande, dependiendo del número de consumidores que participen en el autoconsumo colectivo. Otro de los obstáculos identificados por Goiener es la falta de un marco normativo sobre almacenamiento para comunidades energéticas
