Why are microgrids becoming more popular in the United States?

Microgrids have become increasingly popular in the United States. About 34% of the world's microgrid projects are located in the United States and North America area - drivers for this fast growth could include the country's aging electricity megagrid and end-use customers' increasing desire for greater security and reliability .

Why is China developing a microgrid?

China started its microgrid development through the 12th Five Year Plan (FYP, from 2011 to 2015). The primary goal is to find a distributed clean energy way which can relieve China's dependence on centralized coal power, reduce low emission, and improve air quality.

What role will microgrids play in the future power grid?

As an important part of the smart grid of the future, microgrids will play an important role in the future power grid by taking advantage of its strengths such as accommodation of diversification of energy forms, flexibility of grid connection interfaces, customization of power quality, and bi-directional energy information flow.

What is a microgrid & how can it help a community?

While the balance of driving factors and the details of the particular solution may differ from place to place, microgrids have emerged as a flexible architecture for deploying distributed energy resources (DERs) that can meet the wide ranging needs of different communities from metropolitan New York to rural India.

Are microgrids sustainable?

Today, however, projects are increasingly leveraging more sustainable resources like solar power and energy storage. Microgrids can run on

renewables, natural gas-fueled combustion turbines, or emerging sources such as fuel cells or even small modular nuclear reactors, when they become commercially available.

Which states can facilitate microgrid development?

States can facilitate microgrid development. California, Connecticut, Massachusetts, New Jersey, and New York have created clean energy banks, grants, or other funding opportunities for microgrids. For example, New York has established a \$40 million grant program to create community microgrid projects.
