Overview

What is liquid air energy storage?

Energy 5 012002 DOI 10.1088/2516-1083/aca26a Article PDF Liquid air energy storage (LAES) uses air as both the storage medium and working fluid, and it falls into the broad category of thermo-mechanical energy storage technologies.

What is a working fluid for ASU?

Wang et al proposed the use of crude nitrogen from the ASU as the working fluid for LAES, part of compression heat from LAES charging process for the regeneration of ASU absorber (air cleaning unit), and the use of high-purity oxygen product from the ASU sold for additional revenues.

Which thermal energy storage materials are suitable for LAES?

Numerous studies can be found in the literature on thermal energy storage materials, devices, and system integration, but not all are suitable for LAES. Compression heat store and storage media Water, thermal oil and solid particulate are among the main TES materials for storing compression heat.

Is a liquid air storage system more efficient than a CAES system?

Kantharaj et al proposed a CAES system with liquid air storage, with an aim to overcome the needs for a pressurized large storage tank and the geological constraint of CAES. They found an efficiency of the hybrid system at about 42%, and concluded that the system was more economical than purely an LAES or a CAES system.

What is a thermo-mechanical energy storage technology?

This work is concerned with LAES, which is a thermo-mechanical energy storage technology, and an alternative to PHES and conventional CAES technologies. Such a technology has several key advantages including high scalability, no geographical/geological constraints, cost-effectiveness, and

multi-vector energy service provision .

What is the difference between liquid based and solid based cold storage?

The liquid-based cold storage materials have a high specific heat and are easy to control both the temperature and the heat transfer, but are flammable and expensive. The solid-based cold storage materials are cheaper and safer but are not easy to control the temperature and heat transfer.
