New standards for lithium-ion batteries for energy storage at home and abroad

Overview

WARRENDALE, Pa. (April 19, 2023) – SAE International, the world's leading authority in mobility standards development, has released a new standard document that aids in mitigating risk for the storage of lithium-ion cells, traction batteries, and battery systems intended for use in automotive-type propulsion systems and similar large format .

WARRENDALE, Pa. (April 19, 2023) – SAE International, the world's leading authority in mobility standards development, has released a new standard document that aids in mitigating risk for the storage of lithium-ion cells, traction batteries, and battery systems intended for use in automotive-type propulsion systems and similar large format .

This document provides an overview of current codes and standards (C+S) applicable to U.S. installations of utility-scale battery energy storage systems.

This document outlines a U.S. national blueprint for lithium-based batteries, developed by FCAB to guide federal investments in the domestic lithium-battery manufacturing value chain that will decarbonize the transportation sector and bring clean-energy manufacturing jobs to America.

Lithium-ion batteries are the state-of-the-art electrochemical energy storage technology for mobile electronic devices and electric vehicles. Accordingly, they have attracted a continuously increasing interest in academia and industry, which has led to a steady improvement in energy and power density, while the costs have decreased at even .

This article summarizes key codes and standards (C&S) that apply to grid energy storage systems. The article also gives several examples of industry efforts to update or create new standards to remove gaps in energy storage C&S and to accommodate new and emerging energy storage technologies. Should lithium-based batteries be a domestic supply chain?

Establishing a domestic supply chain for lithium-based batteries requires a national commitment to both solving breakthrough scientific challenges for new materials and developing a manufacturing base that meets the demands

of the growing electric vehicle (EV) and stationary grid storage markets.

What are rechargeable lithium-ion batteries?

Rechargeable lithium-ion batteries (LIBs) are widely used in electrified vehicles, consumer electronics, and stationary energy storage systems. Simultaneous realization of high safety and high energy density/performance is a perpetual pursuit.

What is the National Blueprint for lithium batteries?

This National Blueprint for Lithium Batteries, developed by the Federal Consortium for Advanced Batteries will help guide investments to develop a domestic lithium-battery manufacturing value chain that creates equitable clean-energy manufacturing jobs in America while helping to mitigate climate change impacts.

Should lithium-ion batteries be commercialized?

In fact, compared to other emerging battery technologies, lithium-ion batteries have the great advantage of being commercialized already, allowing for at least a rough estimation of what might be possible at the cell level when reporting the performance of new cell components in lab-scale devices.

How much energy does a lithium ion battery use?

Li-ion batteries have a typical deep cycle life of about 3000 times, which translates into an LCC of more than \$0.20 kWh⁻¹, much higher than the renewable electricity cost (Fig. 4 a). The DOE target for energy storage is less than \$0.05 kWh⁻¹, 3-5 times lower than today's state-of-the-art technology.

Are new battery technologies a risk to energy storage systems?

While modern battery technologies, including lithium ion (Li-ion), increase the technical and economic viability of grid energy storage, they also present new or unknown risks to managing the safety of energy storage systems (ESS). This article focuses on the particular challenges presented by newer battery technologies.

New standards for lithium-ion batteries for energy storage at home

The Codes and Standards Facilitating the Design and Adoption of ...

Energy storage, primarily in the form of lithium-ion (Li-ion) battery systems, is growing by leaps and bounds. Analyst Wood Mackenzie forecasts nearly 12 GWh of deployments in 2021 in the ...
