Overview

Can a jackhammer be plugged into a generator?

You need a power source which could include a generator or AC outlet. As you can imagine, the big limitation revolves around being tethered to that power cord. If you're plugged into a tow-behind generator, you're in the same predicament as the pneumatic jackhammer. Gas-powered jackhammers break the mold.

How do I remove the intake panel from the generator?

1. Raise the lid and remove the front panel by lifting it straight up and out while the lid is opening.
2. Use a 4mm hex key to remove the two mounting screws (B) and L-bracket screws (C).
3. Lift the intake panel up and away from the generator. Note: Always lift the intake side panel straight up before pulling away from the enclosure.

What should I do if my Jackhammer is not working?

Shut off the air supply and relieve pressure from the supply hose, or disconnect from electrical power source before changing tool points. Do the same when leaving the jackhammer unattended. Immediately remove defective or malfunctioning jackhammers and other tools until they are properly repaired.

Do you need a pump for a hydraulic jackhammer?

With a hydraulic jackhammer, you will likely need to bring a pump just for that tool. Electric jackhammers are quickly growing in popularity. With the rapid progress in electric motor technology, these jackhammers can now match the power of all the other jackhammer options while remaining lightweight and quieter.

Are hydraulic jackhammers good for excavating?

You can find hand-operated hydraulic jackhammers, but for the most part,

these are a more popular option for excavating equipment that already has hydraulic lines. In addition to the limitations of the pneumatic jackhammer, hydraulic jackhammers have a couple more downsides. First, they tend to be heavier. Jackhammers are heavy tools.

How does a jackhammer work?

Using any bit on a surface that it is not designed for will damage or destroy the bit. The actual jackhammer operation is very intuitive. After it's connected, the handle will have a trigger that turns the jackhammer on. Some electric models will require the unit to be powered on for the trigger to work.
