Norfolk Island newsun energy

Overview

Why is Norfolk Island transitioning to green energy?

Norfolk Island is transitioning to green energy to reduce its dependence on diesel-fired generation, which is becoming more expensive and more difficult to source as countries around the world seek to decarbonize their economies. This initiative is comprised of several interrelated elements: Project Background.

Does Norfolk Island have too much solar energy?

That's pretty impressive given its remoteness and a population of 1,849. But this uptake has also caused some headaches in managing Norfolk Island's electricity network, with too much solar energy goodness generated at times. The Tesla battery system installed in December 2020 has helped out on that front.

How much does electricity cost on Norfolk Island?

Electricity tariffs on Norfolk Island are dynamic and reflect the operation of the power system each and every half hour. Residents with a time-of-use meter pay and receive the dynamic tariffs. \$0.90 per day for daily supply charge.

Why is the government supporting the Norfolk Island community?

The Government is supporting the community to transition to a more sustainable and cost-effective power base. The remote location of Norfolk Island, compounded by freight and supply chain shortages on a global scale, means it was appropriate to look at temporary measures to address the significantly increased cost of power for consumers.

What does the \$200,000 subsidy mean for Norfolk Island?

The \$200,000 subsidy is an interim arrangement while Norfolk Island makes the transition to renewable power, supported by the Australian Government's \$5.3 million investment in improvements to Norfolk Island's electricity network

including the roll-out of solar infrastructure.

What is Norfolk Island's diesel-fired generation initiative?

This initiative is comprised of several interrelated elements: Project Background In 2022, the Commonwealth Government provided a \$5.25 million grant to Norfolk Island Regional Council to transition the island away from diesel-fired generation.

Norfolk Island newsun energy

Electricity

The current Energy supply on Norfolk Island consists of: 6 x 1.0MW diesel generators generating at 415 volts - 3 x CAT and 3 x Cummins gen-sets; Diesel fuel supply on site of approximately 90,000 litres; 4 x 750 KvA 415/6600 volt step-up transformers;

Norfolk Island Electricity System Improvements and ...

Norfolk Island is transitioning to green energy to reduce its dependence on diesel-fired generation, which is becoming more expensive and more difficult to source as countries around the world seek to decarbonize their economies.

Billing and BESY Energy , FAQs , Norfolk Island , BESY Energy

On Norfolk Island electricity is still largely generated by diesel generators. The tariff for this source of energy is 82 cents/kWh from 1 July 2024. However, the diesel generators can be turned off ...
