# Oilfield Photovoltaic Energy Storage System

## Overview

---

Is the oil & gas industry integrating solar PV technology?

In a recent study, it was noted that the oil and gas industry has difficulties integrating solar PV technology in their energy supply chain, and the industry is in a trend to leave solar and concentrate more on fossil based fuels .

Can solar energy be used in oil field operations?

One potential application of solar energy in oil field operations is the supply of low-medium temperature process heat required for operations such as degassing, dewatering and desalting. An effort to assess this application is being pursued by Kuwait Petroleum Corporation in cooperation with the authors of this review.

Where will solar energy applications be favored by the oil and gas industry?

We expect that solar energy applications by the oil and gas industry will be specifically favored in countries within the Middle East and North Africa region, which have significant oil and gas reserves, vast areas that can be utilized for solar plants, and high solar radiation.

Can solar energy meet the energy requirements of the oil and gas industry?

The scope of this review is to highlight the potential contributions of solar energy in meeting the energy requirements of the oil and gas industry. It includes an assessment of the key factors that impact the world energy scene and the anticipated role of solar energy up to 2035.

What is a photovoltaic system?

These include replacement of conventional electrical energy sources, either grid supplied or off-grid generators, with photovoltaic (PV) systems or wind mills to power a variety of equipment and instruments throughout the production chain (e.g., well pumps, gathering centers, and pipelines).

Can oil wells be used for solar energy?

The plan is to retrofit depleted oil wells to store concentrated solar energy in super-heated groundwater for long periods of time, then use that heat to drive turbines when energy demand rises.
