

Overview

The module price is currently between 20 PHP per watt. A typical monocrystalline photovoltaic module with an output of 350-450 watts currently costs 12k PHP to 21k PHP. With a 10-kilowatt peak system, there are around 500k PHP in pure module costs. If you opt for a polycrystalline or thin-film module, the costs will.

In the case of temporary shading of PV modules, it makes sense to use power optimizers. These optimize the performance of your modules even under difficult radiation.

The cost of an inverter usually varies between 90k PHP and 240k PHP. How high the actual costs are depends heavily on the device's functionality and manufacturer. However.

The price of electricity storage for private homes will vary between 360k PHP and 900k in 2023. Depending on the manufacturer and memory size, significant price fluctuations can occur.

The price range for the mounting system is usually between 30k PHP and 80k PHP, depending on the size of the system. In-roof mounting systems tend to be more expensive than on-roof systems. However, the advantage here is that.
