Should a general contractor install a solar PV system?

A general contractor may face a choice between using an electrical subcontractor or a solar subcontractor to install the PV system. A good solar contractor will have the expertise in solar PV systems plus qualified electricians on staff.

How do I install PV modules?

Here's a step-by-step guide to the installation process: 1. Frame and Mounting Considerations: To mount the PV modules, a sturdy frame, often made of lightweight aluminum, is utilized. Two common options for flat roof mounting are available: The frame is firmly attached to the roof.

What are photovoltaic panels & how do they work?

Photovoltaic panels, or solar panels, are the most crucial component of a solar power system. They are responsible for converting sunlight into direct current (DC) electricity through a process called the photovoltaic effect. Solar panels are made up of many individual solar cells, which are usually made from silicon, a semi-conducting material.

How should a PV system be installed?

Site Assessment: Before starting the installation process, assess the site to check for factors such as shading, temperature, and orientation that may affect the performance of the PV system. The panels should be positioned on a south-facing roof, with an inclination angle of 30-45 degrees for optimal sunlight exposure.

Can a photovoltaic system replace roof cladding?

It is possible for photovoltaic systems to replace roof cladding entirely. This is known as a solar or energy roof. Additionally, PV modules can be integrated into the roof cladding. Solar roof tiles are a special type of in-roof installation. They can be integrated into the existing roof cladding without any extra mounting systems.
