This should be all you need to mount rigid solar panels on the roof or any other flat surface on your home that receives direct sunlight.

How to install solar panels?

Instead just a simple steel pole with a concrete anchor is placed on the ground. This simple structure provides in general sufficient support to solar panels. In some cases, due to the unsuitable soil type or extreme weather conditions, special adjustments are required. Among the available pole mounted schemes, you will often find Side Pole Mounts.

How do solar panels connect to a roof?

In short, the solar panels connect to a roof-mounted frame. The solar panels sit on the frame and are clamped with either a bolt, bracket, or other clamping devices. If you are using a kit, the clamps will match the frame making it easy to secure the panels to the roof.

Why should you choose a custom solar panel frame?

**Efficiency Optimization:** Customization allows for the most efficient positioning of solar panels, maximizing electricity production. **Supply Chain Control:** Custom frames offer greater control over the supply chain, reducing lead

times and costs. The design of a solar panel frame can significantly impact its functionality and ease of installation.

How do you mount a solar panel array?
