Solar System Operations and Maintenance Analysis. For optimizing the balance between reducing operations and maintenance (O&M) cost and improving performance of photovoltaic (PV) systems, NREL collects data, models performance and costs, and provides expertise to industry.

This document is a brief review of recent practical information on PV solar, including performance, quality assurance, installation, asset protection, and maintenance for stakeholders including investors, consumers, engineers and installers.

Within the European PERSIL Project, basic guidelines for the design, installation and maintenance of photovoltaic solar panels are obtained from the data acquired from the operation of 13 photovoltaic installations with different characteristics.

Conducting regular O&M ensures optimal performance of photovoltaic (PV) systems while minimizing the risks of soiling, micro-cracking, internal corrosion, and other problems. Below, you will find several resources that help establish O&M practices. Do photovoltaic systems need maintenance?

What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

What is a photovoltaic system review?

This work intends to make a review of the photovoltaic systems, where the design, operation and maintenance are the key points of these systems. Within the design, the critical components of the system and their own design are revised.

What are the key points of photovoltaic systems research?

It has been analyzed how at present, the greatest advances in photovoltaic systems are focused on improved designs of photovoltaic systems, as well as optimal operation and maintenance, being these the key points of PV systems research. Regarding the PV system design, it has been analyzed the critical components and the design of systems.

Why is PV system operations a growing field?

PV system operations is a growing field because increasing PV penetration into the larger utility system, and an emerging market for ancillary services (e.g., dispatch of storage, sourcing reactive power, curtailment of output) require more system interaction on an ongoing basis.

Are solar photovoltaic (PV) systems a good investment?

As solar photovoltaic (PV) systems have continued their transition from niche applications into large, mature markets in the United States, their potential as financial investments has risen accordingly. Mainstream investors, however, need to feel confident about the risk and return of solar photovoltaic (PV) systems before committing funds.
