How welding strip affect the power of photovoltaic module?

The quality of welding strip will directly affect the current collection efficiency of photovoltaic module, so it has a great impact on the power of photovoltaic module. The so-called photovoltaic welding strip is to coat binary or ternary low-melting alloy on the surface of copper strip with given specification.

Does heterogeneous welding strip affect PV Assembly power improvement?

The welding strip is an important part of photovoltaic module. The current of the cell is collected by welding on the main grid of the cell. Therefore, this paper mainly studies the influence of different surface structure of heterogeneous welding strip on PV assembly power improvement. The main findings are as follows:.

How to reduce the shading area of a photovoltaic welding strip?

The shading area of the photovoltaic welding strip is reduced by reducing the width of the main grid line and the PV welding strip, and the total amount of light received by the solar cell is increased. However, the contact resistance of the whole PV assembly is too large, which increases the electrical loss of the photovoltaic module.

How does a photovoltaic module work?

In the photovoltaic module, the photovoltaic welding strip is packaged in EVA, and the reflected light from the surface of the photovoltaic welding strip passes through EVA and glass and enters the air. The transmission path of light is shown in Fig. 1.

What is the packaging process of photovoltaic modules?

The packaging process of photovoltaic modules is described as follows: The core of cell is the internal PN junction. According to the current diffusion technology, the voltage at both ends of the battery is about 0.50 V, and the

working current is about 8 A.

How to improve the power of photovoltaic module?

When the incident angle of reflection light on the surface of photovoltaic welding strip is  $\alpha_1 > 42.5^\circ$  at the EVA/glass interface, more and more light in the reflected light will be refracted on the surface of the solar cell in photovoltaic module. Finally, the power of photovoltaic module will be improved. Fig. 1. Reflection Light Path.
