Installers have two methods for connecting photovoltaic panels at their disposal – series connection and parallel connection.

When wiring solar panels, you have two main options: series and parallel connections.

Connecting PV modules in series and parallel are the two basic options, but you can also combine series and parallel wiring to create a hybrid solar panel array.

In this section, we teach you how to attach a solar connector to a wire, lock or unlock it, and install it in series, parallel, and series-parallel.
