## Overview

Good to know: Series connection of batteries or solar panels will increase the level of voltage e.g two 12V, 5A PV panel or 12V, 100A battery in series will provide 24V. Parallel connection of PV panels and batteries will add up the current and ampere hour rating of battery (storage capacity) e.g. two 12V, 5A PV panels in series will provide 12V, 10A. .

When installing solar panels in series, the voltage adds up, but the current stays the same for all of the elements.

Cautions: Only the same rated solar panel can be wired up either in series or parallel connection. In other words, 6V pv panel should not be connected with 12 or 24V PV Panel. Similarly, only same rated batteries should be connected in series or parallel configuration. This means a 6V battery should not be connected with 12V batteries.
