# Photovoltaic thermal support system

## Overview

---

A photovoltaic–thermal (PV/T) system does both the generation of electric power and collection of thermal energy at the same time.

A photovoltaic–thermal (PV/T) system does both the generation of electric power and collection of thermal energy at the same time.

In this context, a photovoltaic/thermal (PV/T) system is suggested to decrease the thermal stress of the PV panel by removal of heat and make it useful at high PV module temperature.

The PVT system combines photovoltaics with a thermal collector to convert both electrical and thermal energy simultaneously.
