How to simulate a plc with an integrated PI controller?

The simulation of the PLC with an integrated PI controller is conducted using the PLCSim software, while the simulation of the microgrid and the EMS based on fuzzy logic is performed using MATLAB. The developed framework operates according to the following steps: visualization of data using HMI.

What is the supervisory control system for a microgrid?

The supervisory control system for a microgrid is known as the microgrid controller. Low-level control strategies focus on switched-mode control and converter control. At this level of control, power system control focuses on voltage and frequency regulation or tasks like reactive power control.

How to improve power quality and load supply within a microgrid?

Validating the developed framework through a case study in the research field, specifically by applying an advanced Energy Management System (EMS) based on a fuzzy logic controller to enhance power quality and load supply within a Microgrid (MG). Designing an HMI for monitoring the MG using WinCC-RT. The general paper organization is as follows.

What ESS is used for a microgrid?

This ESS provides peak shaving for the local microgrid and can be used to support the microgrid when islanded. Both a desktop simulation and a Speedgoat hardware-in-the-loop simulation with an Allen-Bradley PLC are used to test and validate the supervisory microgrid control strategy prior to grid integration.

What is the electrical architecture of a microgrid?

Electrical architecture of the studied microgrid (case study). The current and voltage sensors of the distributed generators, the state of charge and the battery temperature are connected to the PLC inputs. Although the PLC

outputs control the switches K b a t, K d u m p and K l o a d s.

What is a GPG plc?

The GPG software platform includes an IEC 61131-3-based Programmable Logic Controller (PLC) module for maximum data processing and control. GPG effortlessly links the PLC with the unique database facilitating system engineering, the development of Automation Applications, and the interactions and relative priority between such applications.
