What is a power distribution cabinet?

D Power distribution cabinets of large PDUs are often seen in large data centers for raised and non-raised floor applications to take incoming power and distribute it to an individual rack or groups of racks. Distribution capacity can range from 84 to 252 circuit breaker pole positions.

What power levels can a power distribution cabinet use?

You can flexibly choose different power levels (30kVA, 50kVA, 80kVA, 100kVA or 125kVA) according to your power demands to your system. The Power Distribution Cabinet can be used with a transformer for voltage conversion, or installed with Transient Voltage Surge Suppressors (TVSS) to protect highly sensitive equipment.

What is a power distribution rack (PDR)?

C Power distribution racks (PDR) are typically seen in larger high-density data center environments. A power distribution rack provides space-saving power distribution in a flexible design. These racks can offer 168 circuits and accommodate more servers with multiple power cords and rack PDUs with growing loads.

What is a rack power distribution unit?

Rack power distribution units, also known as rack PDUs, are a key component to any IT environment. As the name suggests, they distribute power to network equipment within racks. A common misconception is that they're just power strips, and at first glance, they even look like it, but modern rack PDUs provide benefits a simple power strip cannot.

What is a power distribution cabinet (PDC)?

For power distribution requirements of medium to large data centers, Delta's Power Distribution Cabinet (PDC) provides an optimal solution. The space-

saving PDC is easy to move and adapt to future reconfigurations of the data center.

How to check the status of a power distribution cabinet?

The LCD monitor of the Power Distribution Cabinet can display the current system status and event logs, and allows you to set and view parameters.
