Prices of photovoltaic modules and inverters

Overview

Photovoltaic Price Index. Every month we publish a current price index on the development of wholesale prices of solar modules. In doing so, we differentiate between the main technologies available on the market. Since 2009, pvXchange has provided a unique price index for the European market, which has become an invaluable industry tool.

IRENA presents solar photovoltaic module prices for a number of different technologies. Here we use the average yearly price for technologies 'Thin film a-Si/u-Si or Global Price Index (from Q4 2013)'.

NREL analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems.

Today's premium monocrystalline solar panels typically cost between \$1 and \$1.50 per Watt, putting the price of a single 400-watt solar panel between \$400 and \$600, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.75 per watt, putting the price of a 400-watt panel at \$300.

At the average \$0.18 per watt and with the average installation costing \$2.93 per watt, inverters usually account for about 6% of total installation costs. This means that a typical 5.6-kilowatt installation costs \$16,408 in total and the inverter should account for about \$1,000 of that. How much does a solar inverter cost?

Inverter replacement: If your solar system uses a string inverter, it may need to be replaced. String inverters generally last between 10 and 12 years, while

solar panels last for 25 years or more. Getting a new string inverter could cost about \$1,500.

How much does it cost to install solar panels?

According to our solar experts, solar panels cost about \$19,000 to install in the United States, on average. While the price tag seems steep, incentives and payment options help make the cost of going solar easier to manage. The total cost of a solar installation depends on your location, energy usage, and even the type of equipment you use!.

How much does solar cost per watt?

Most of the time, you'll see solar system costs listed as the cost per watt of solar installed so you can easily compare prices between quotes for different system sizes. The average cost per watt of solar is \$3.00 per watt, but you may get some quotes that are slightly higher or slightly lower than average. Beware of extremely low solar prices.

How much does a string inverter cost?

Getting a new string inverter could cost about \$1,500. Solar panel repairs: Solar panels are extremely durable, and a National Renewable Energy Laboratory study found that solar panel failure rates are incredibly rare, but just like with any purchase, your solar panels may require repairs in the future.

How much does a 400 watt solar panel cost?

Today's premium monocrystalline solar panels typically cost between \$1 and \$1.50 per Watt, putting the price of a single 400-watt solar panel between \$400 and \$600, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.75 per watt, putting the price of a 400-watt panel at \$300.

Can I buy my own solar inverter?

If you want to buy your own inverter you certainly can, but keep in mind that since you'll only be purchasing a single inverter - not a bulk order like solar companies - you'll likely pay a higher price. How much you spend, of course, depends on the manufacturer and the size, efficiency, warranty, and brand recognition.
