Pros and cons of portable photovoltaic panels

Overview

Unlike a solar panel that you might place on your roof, which is set in a fixed, rigid frame and sealed under glass, a typical portable panel is usually encased in a protective sleeve made of mesh fabric or plastic. Small, inexpensive (under \$50) panels will generate 5 to 50 watts, while larger ones can generate 300.

Because these panels are portable, they are often used by campers, travelers, or anyone who needs a supply of electricity when unable to access grid electricity. But because they come in so many different sizes and costs, there are.
