### What Safety Certifications Exist for Small Wind Turbines?

For wind turbines under 100 kilowatts, purchasing a model that has been certified to performance and safety standards is the best way to ensure safe operation. The Small Wind Certification Council, UL, and other entities provide accredited, third-party verification for safety .

These ordinances regulate aspects of wind projects such as their location, permitting process, and construction. The standards specified in ordinances provide clarity to wind developers and the public. Ordinances may also address issues of community impact such as: land use, noise standards, and safety. The WINDEXchange ordinances database is a .

The standardization of safety training requirements for people working at sea to build and operate offshore wind energy projects, adoption of those standards, and alignment with offshore safety training curriculum development was identified as a high-priority workforce gap in the U.S. Offshore Wind Workforce Assessment. What are wind turbine safety rules?

The Wind Turbine Safety Rules (WTSRs) are a model set of Safety Rules and procedures to help formalise a Safe System of Work (SSoW) to manage the significant risks associated with a wind turbine, both onshore and offshore.

What are the EHS Guidelines for wind energy?

The EHS Guidelines for Wind Energy include information relevant to environmental, health, and safety aspects of onshore and offshore wind energy facilities.

What are the health and safety hazards associated with wind energy facilities?

Their management is discussed in the General EHS Guidelines. 57. Community health and safety hazards specific to wind energy facilities primarily include the following: 58. A failure of the rotor blade can result in the “throwing” of a rotor blade, or part thereof, which may affect public safety.

Are there safety issues with wind turbines?

74. Safety issues may arise with public access to wind turbines (e.g., unauthorized climbing of the turbine) or to the wind energy facility substation.

Do wind energy employers need to protect workers from workplace hazards?

Wind energy employers need to protect their workers from workplace hazards and workers should be engaged in workplace safety and health and need to understand how to protect themselves from these hazards. While this is a growing industry, the hazards are not unique and OSHA has many standards that cover them.

What is a wind farm safety system?

They have been developed by wind farm owners and operators for the purpose of achieving both general safety and safety from the system – a process that safeguards persons from the mechanical plant and LV apparatus and the associated system derived hazards.
