# Schematic diagram of solar power generation at the tunnel entrance

## Overview

---

How does a solar plant work?

The solar plant will produce power which will be directed to the grid via a substation. The plant will contain the solar arrays and inverters. The substation contain all necessary components including transformers, protection relays, monitoring equipment, and capacitor bank.

What are the components of a solar substation?

The substation contain all necessary components including transformers, protection relays, monitoring equipment, and capacitor bank. Due to increasing renewable energy standards set by RES, Black & Veatch is sponsoring a senior design project to design a 60 MW grid tied solar power plant with an attached 115kV/34.5 kV substation.

What drawings are required for the solar array and substation?

Detailed drawings for the solar array and substation will be required. The first semester will focus on the solar generation schematics and one-line drawings for the substation. During the second semester the team will begin detailed three-line drawings for the substation. First and second semester engineering schedule is laid out in figure 1.

How does solar power flow through a substation?

Solar Plant Layout Power flow through the substation component begins at the collector arrangement, then flowing through 3 feeders the 34.5 kV bus, finally voltage is stepped up and sent to the 115 kV bus. Consult figure 4 for a simplified block. Detailed drawings are provided with the complementary documents outlined in the drawing list.

What is solar power generation?

Solar power generation is a renewable method of proving electrical power to a grid or load. The solar plant will produce power which will be directed to the

grid via a substation. The plant will contain the solar arrays and inverters.

Who is responsible for the design of a solar substation?

The proper documentation of the design will be the responsibility of the senior design team. Detailed drawings for the solar array and substation will be required. The first semester will focus on the solar generation schematics and one-line drawings for the substation.
