What is a solar thermal power plant?

Solar thermal power plants usually have a large field, or array, of collectors that supply heat to a turbine and generator. Several solar thermal power facilities in the United States have two or more solar power plants with separate arrays and generators.

Are solar thermal power plants controllable?

Since power generation can be flexibly adapted to demand, solar thermal power plants are referred to as controllable power plants. Solar thermal power plants have an additional advantage. If there is little solar radiation for several days due to the weather, they can be operated in hybrid mode.

Can solar thermal power plants replace fossil fuel power plants?

Solar thermal power plants can replace fossil fuel power plants in their role as base load and peak load generators. For direct, decentralised power supply to industrial areas, smaller CSP systems are economically interesting if the industrial customers buy not only electricity but also process heat. 4. Are solar thermal power plants competitive?

.

How does a solar tower power plant work?

In a solar tower power plant, biaxially tracking mirrors, referred to as heliostats, direct the solar radiation onto a central receiver mounted on a tower. A heat transfer medium, usually molten salt or alternatively water / steam or air, absorbs the energy there and transports it to the thermal storage system and to the power plant circuit.

How do solar thermal power plants work?

Solar thermal power plants therefore rely on the storage of the intermediate product heat and not the end product electricity. Electricity is generated by means of a steam turbine cycle, which is operated according to demand and is supplied from the thermal storage system.

Which solar power station uses molten salt thermal energy storage?

The Andasol Solar Power Station, Spain, uses a molten salt thermal energy storage to generate electricity, even when the sun isn't shining. Parts of the Solnova Solar Power Station in the foreground. The two towers of the PS10 and PS20 solar power stations can be seen in the background. Solar power tower PV integrated. With 14h heat storage ?
