

European Solar and Energy Storage Solutions

Shandeka G7 solar panels

Support Customized Product

Overview

What makes G7 a successful IPP?

Thanks to its highly skilled and multi-disciplinary team G7 has become a fully integrated IPP. We design, develop, commercialise, engineer, and are now to also build and operate renewable energy power plants. G7 is growing a pipeline of projects comprising more than 2GW of wind energy at various stages of maturity.

What are the main sources of electricity in the G7?

In 2020, natural gas and renewables were the primary sources of electricity in the G7, each providing about 30% of the total, followed by nuclear power and coal at close to 20% each. Momentum is building as governments in the G7 are re-shaping the electricity policy landscape with net zero in their sights.

Which countries are part of the G7?

G7 members – Canada, France, Germany, Italy, Japan, the United Kingdom, the United States plus the European Union – in 2020 accounted for nearly 40% of the global economy, 30% of global energy demand and 25% of global energy-related CO₂ emissions.

How can G7 achieve net zero emissions?

All G7 members have made a commitment to reach net zero emissions, underpinned in each case by a range of policy measures and targets that aim to phase out or reduce unabated coal-fired power while increasing the use of renewables, hydrogen, ammonia and carbon capture technologies, among other things.

How can the G7 achieve net zero?

G7 members have also pioneered carbon pricing mechanisms and continue to apply these to support the decarbonisation of electricity. Scaling up low-carbon technologies is the central pillar to achieve net zero, with wind and

solar PV capacity additions scaling up from about 75 GW in 2020 to 230 GW by 2030.

Shandeka G7 solar panels

7 New Solar Panel Technologies Shaping the Future of ...

The latest solar panel technology advancements are reshaping how we think about energy and its role in modern life, positioning solar power as an essential part of the future of sustainable energy. By streamlining the ...
